

SySAM Monitor for PowerDesigner

A simple tool for automated monitoring of PowerDesigner license usage managed by the SySAM License Server.

- Are you running out of PowerDesigner licenses during peak hours?
- Do you want to know which users are holding licenses even when not actively using PowerDesigner?
- Are you interested in identifying peak usage hours or days?
- Do you need to assess the risk of license shortages?

SAP POWERDESIGNER

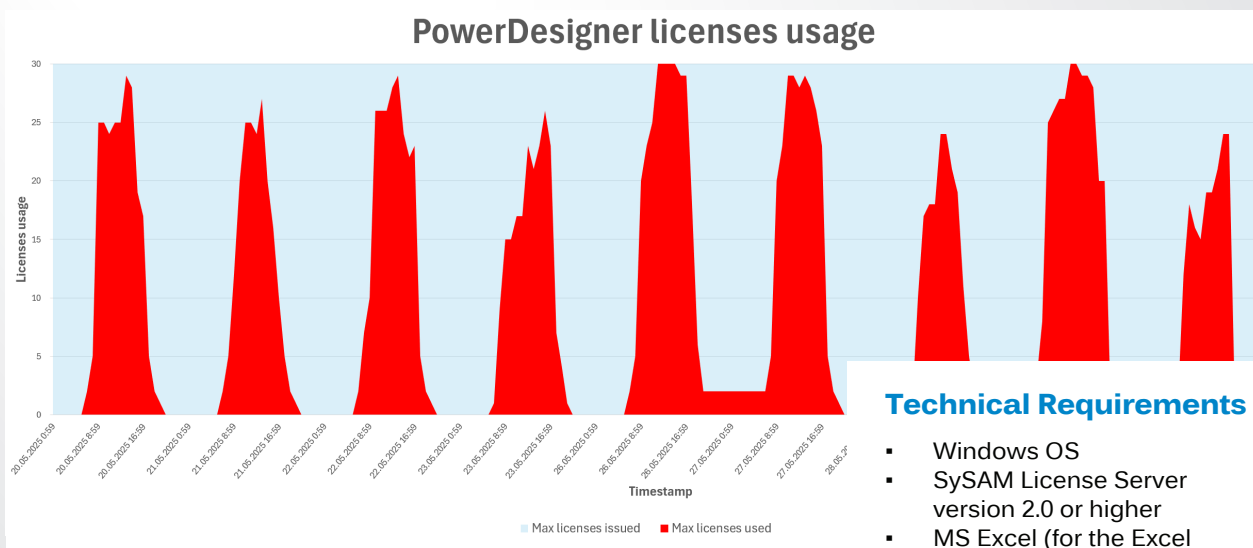

SySAM Monitor allows you to:

- perform regular monitoring at customizable time intervals,
- export data to MS Excel.

When exporting to XLSX format, automatic data visualization in a pivot chart is included, giving you immediate insight into license usage.

At any time, users can access a clear overview of:

- the total and current number of licenses in use,
- the complete usage history,
- a list of specific users who were using a PowerDesigner license at a given time.

Technical Requirements

- Windows OS
- SySAM License Server version 2.0 or higher
- MS Excel (for the Excel export variant)

About Us

MIBCON DIMA s.r.o. is a consulting company focused on delivering IT services that help you use your data safely and effectively.
